

# Team Mouritsen's lamp

Emission:

## 95 kg of CO<sub>2</sub>eq

### Comments on the result

Here you can see that by far the largest part of the emissions comes from the product use phase since lamps use electricity. Almost all the rest of the impact is due to the plastic parts and the electronic parts.

There are emissions from the use phase on all products, because of the waste that is generated from returned products from consumers.

### Disclaimers:

We assume that metals, plastics and textiles are produced according to the global average unless we know differently.

All other materials are assumed to be produced in the EU

We assume a transport distance by lorry from supplier to warehouse of 1,000 km

We assume a transport distance from warehouse to final client of 1,000 km

Målbar builds their assumptions on their experience with industrial production and LCA's on manufacturing companies.
