

COUNTRY SHARES

In this module you have the opportunity to apply the right proportions to all the locations and routes you have defined.

This is the final step to enable our calculations to present the right impact from **logistics, use phase, and disposal**.

Why do we need to know your country shares?

Having your country shares input enables for absolute configuration of all your product screenings to match your "world".

TAILORED INSIGHTS WITH COUNTRY SHARES

- **A clearer picture:** By assigning the correct proportions to each journey, you can gain a complete view of emissions at product level, while also identifying key impact hotspots across your entire supply chain.
- **Smarter prioritising:** Focus your reduction efforts where they matter most.

For e.g. maybe it is the 5% of AIR-shipped products between warehouses and clients in Canada that are driving up your logistics emissions and dominate your product emissions?
With the Country shares completed, you will know.
- **Enhanced GhG Reporting:** Get detailed data ready for precise greenhouse gas reporting.
